

This is an Emerald Ash Borer Quarantine Zone!

THE FOLLOWING ARE REGULATED AND REQUIRE A COMPLIANCE AGREEMENT TO MOVE OUT OF HILLSBOROUGH COUNTY:

- **HARDWOOD FIREWOOD**
- **ASH NURSERY STOCK**
- **ASH WOOD PRODUCTS**

Photo by David Cappaert, Michigan State University

EAB infestations can kill ash trees in just 3-5 years.

CONCERNED ABOUT YOUR ASH? - MAKE AN EAB PLAN.

- **SURVEY YOUR PROPERTY FOR ASH NUMBERS AND SIZES.**
- **DETERMINE YOUR MANAGEMENT GOALS AND BUDGET.**

Emerald ash borer (EAB) is the most destructive forest pest in North America.

Photos by Nathan Siegert, USFS

Sprouts at the base of the tree & crown die-back (left), larval galleries (center), and heavy woodpecker activity “blonding” (right) are signs of EAB infestation.

Avoid moving forest pests! Use certified heat-treated firewood or buy it local, burn it local!
